

Marine “Call-Out” Services

As the world's leading provider of survey services to the oil and gas industry, Fugro Chance Inc. (Chance) positions more offshore oil drilling rigs, production platforms, and pipeline lay-barges than any other surveying company in the world. Encompassing a broad spectrum of expertise of all aspects of the marine “call-out” business is what separates Chance from other surveying and positioning firms.

Fugro maintains a cooperative relationship among its companies throughout the world to pool technological resources and related disciplines to undertake complex integrated projects.

Around-the-clock contact is maintained with Chance crews to ensure speed, accuracy, and cost-efficiency in the completion of assignments. Preparation for mobilization is supported by experienced electronics and issue room personnel who inventory, clean and test equipment before sending it out to the field.

Drilling rig operations are high-cost activities requiring rapid reaction and minimal downtime. Accurate site information to conduct these operations is essential to successful offshore positioning. Chance's comprehensive Gulf of Mexico data base contains vast volumes of geographic information and includes a comprehensive data base of wells, pipelines, and hazards. It

also includes Continental Shelf lease information, shipwrecks, block boundary polygons and shipping fairways. Chance's proprietary data base is used to assist clients in planning projects as well as providing information to field crews to avoid delays and assure safe operations. Unique in the industry, this data is continually updated to provide the most current information available.

Responding to client requirements, Chance utilizes its extensive in-house research and development resources to develop navigation tools such as STARFIX.NAV®. This graphic survey and navigation system provides true GIS functionality, real-time positioning, and graphic display in a comprehensive survey, monitoring and calculation system. It allows for simultaneous tracking of an unlimited number of vessels while integrating valuable information from Chance's data base.

PROFESSIONAL SERVICES

- Rig Positioning
- Pipe Lay Surveys
- Derrick Barge Positioning
- Dive Boat Positioning
- Trawl Surveys
- Scanning Sonar Services
- Bathymetry Surveys
- Pre and Post Site Surveys
- Rig Route Surveys
- Core Boat Positioning
- Mooring Systems Positioning
- Template and Jacket Orientation
